## Universal relay with maximum vibration resistance

### Using the all-rounder in a small space

To achieve maximum machine and system availability, many relays must also function reliably in environments with strong vibrations. In addition, compact modules for flat control cabinets are required. TERMSERIES-compact fulfills both demands.

The new, ultra-compact modules round out the TERMSERIES family. Their relays are enclosed, which makes them particularly vibration-proof. Due to the slim and, above all, flat design, they can be installed anywhere. Since they have the same contours as the tried-and-tested TERMSERIES, all the accessories of the series can be used for cross-connections. In this way, comprehensive complete solutions can be realized with the 100% function-tested relay modules.

**Perfect completion of the TERMSERIES**

With its closed design and depth of only 63 mm, TERMSERIES-compact completes the proven TERMSERIES. Accessories that can be used in common, contour uniformity, mirror-symmetrical design and continuous cross-connection channels enable highly flexible solutions.

**Universal applicability**

The TERMSERIES-compact can be used in a wide range of applications thanks to different versions and a variety of input voltages. Multi-voltage input of the TERMSERIES with 24-230 V UC and 12-60 V UC are available for the first time in an extremely compact design.

**High efficiency and user-friendliness**

PUSH IN connection technology and colored pushers make wiring 75% faster and considerably safer. Colored accents for input voltages, easy-to-read part numbers, and integrated test taps facilitate maintenance.

**Comprehensive digital support**

Digital provision of all data for WMC, Eplan, CAD and tender texts according to E-Class and ETIM standards. Convenient data support is convenient via QR code on the side of the housing – with link to the data sheet.
